# OUR COMPANY

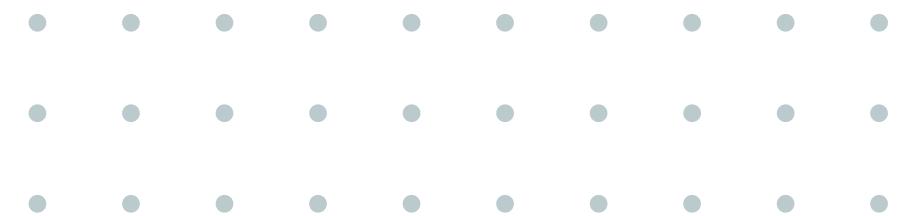

NutriCrave is a Malaysian company that provides healthy and delicious meals through its online. The mission of making nutritious food accessible to everyone.

NutriCrave's system , allowing customers to order and purchase food without having to leave their homes. NutriCrave's program is easily modifiable to reflect changes in food prices on the menu without requiring excessive time and effort. The company's food ordering system is built using programming techniques such as graphical user interface to create a competent and efficient platform. .

# INTRODUCTION

Food ordering systems is a user-friendly and informative to attract customers, and be able to store user data and their selected choices from the menu. The system also clearly convey important information such as the price, description, and illustration of the food. By ensuring the interface is straightforward and easy to navigate, the food ordering process will be seamless for the customer.

01.

# SIGNIFICANCE OF THE PROJECT

# OUR INNOVATIVE

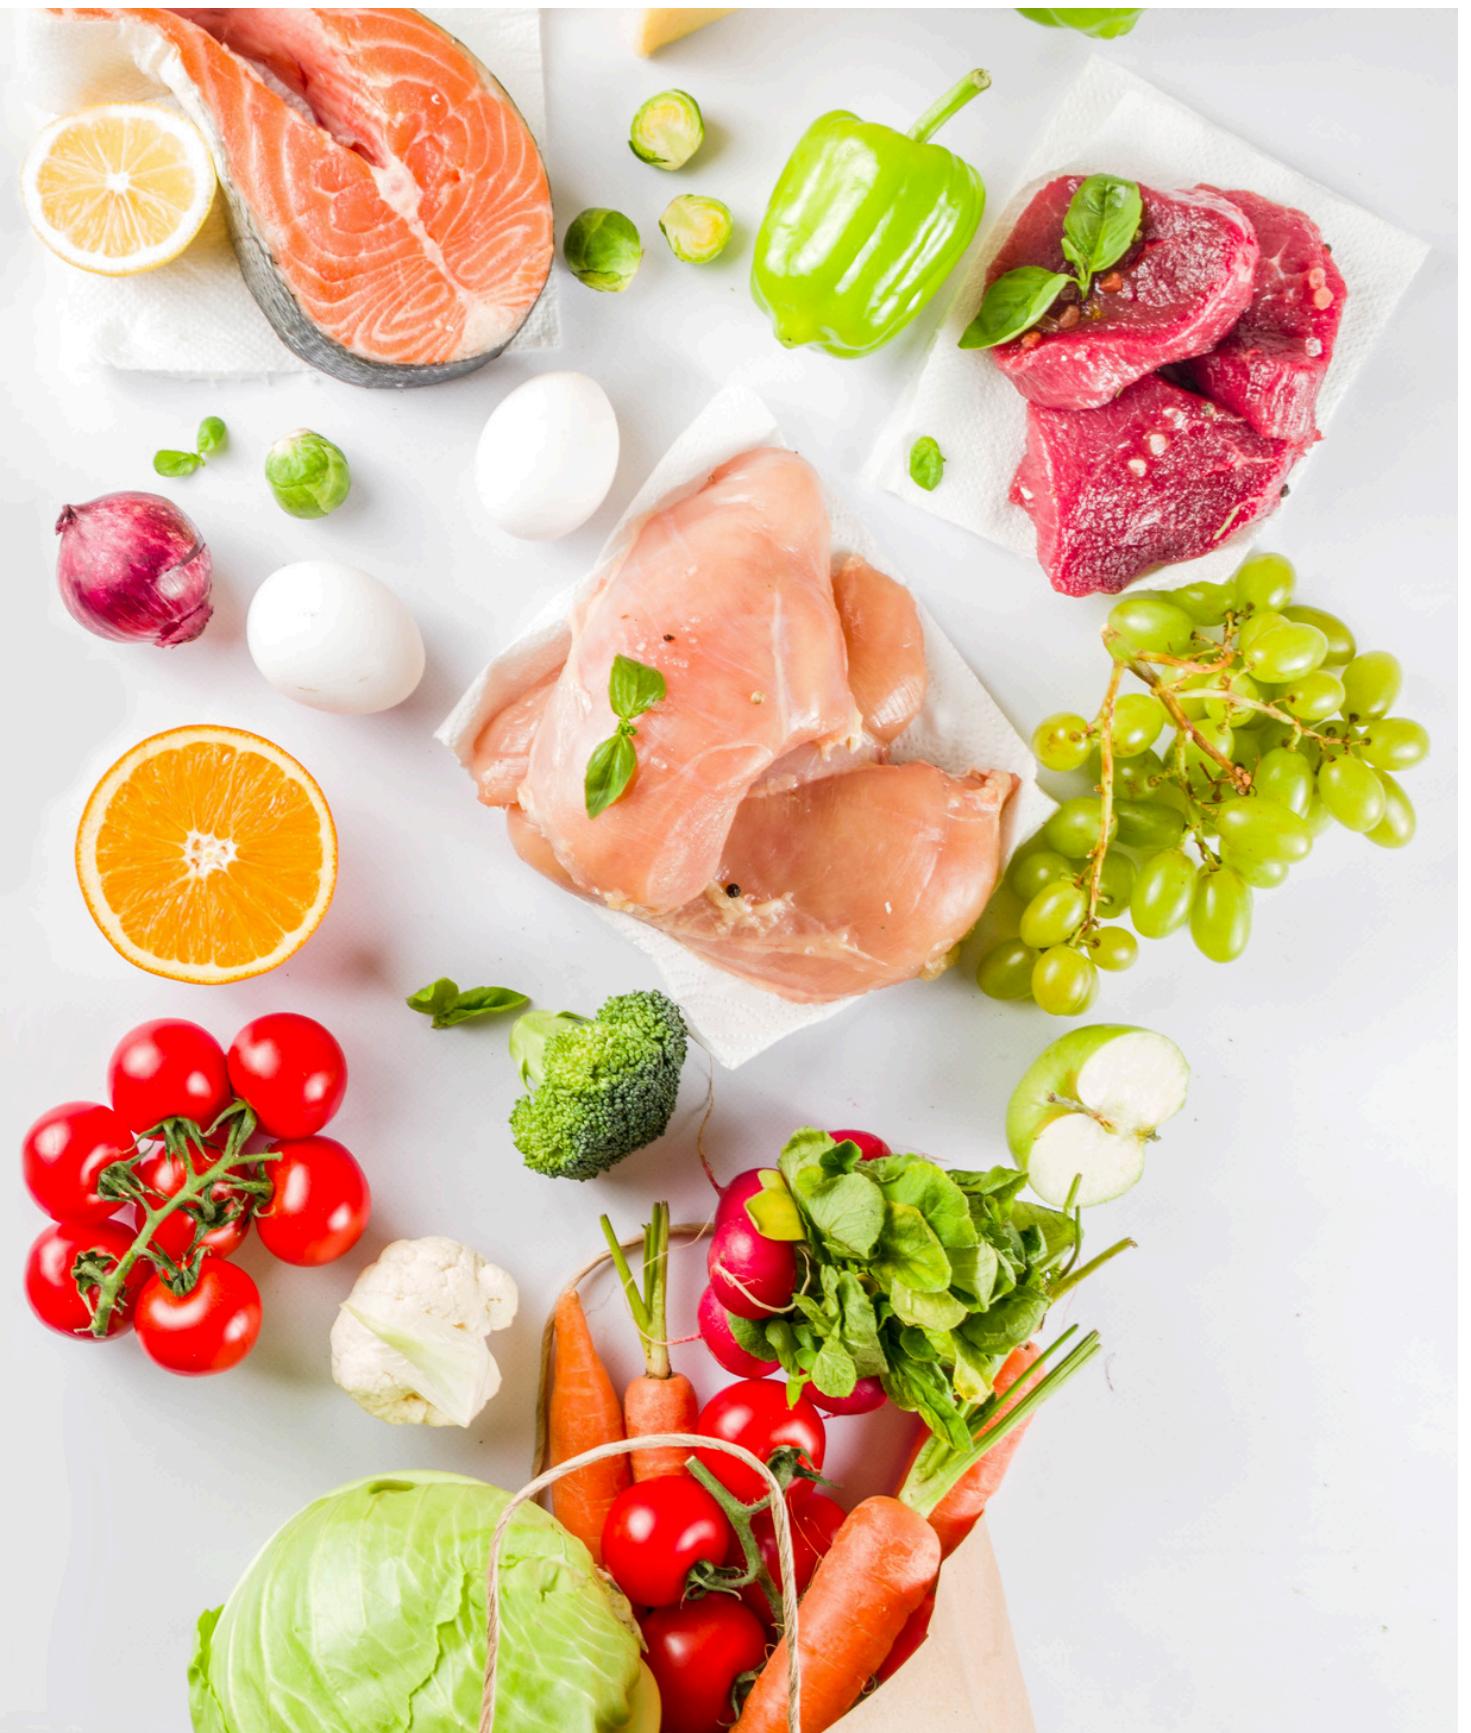

- The project aims to improve upon current food ordering systems by introducing innovative ideas that benefit customers.
- Food ordering apps are strongly correlated with the fast food industry, which is known to be detrimental to health.
- The project aims to promote healthy eating habits in society.
- The project will develop a food ordering system with graphical displays of nutritional values and accurate descriptions of food.
- The system will enable customers to be mindful of their nutritional needs and evaluate their nutrition intake.
- The system aims to attract health-conscious customers and grow a healthy loyal customer base.

## EXTENDING THE PROJECT

# OUR AIM

- The program stores menu data in one dataframe using Pandas library and variables will point to it when required for use.
- Storing all the menu data into an Excel spreadsheet can make it easier for staff to modify the menu data.
- The program can be extended to collect relevant user data such as email and contact information for marketing purposes.
- Collecting legal user data can be leveraged to build business reputation and understand the customer base.
- Implementing frame widgets in the Tkinter library can offer a better user experience.
